

Orthopaedic

Product Range Guide

The conservative management of soft tissue injuries, fractures and orthopaedic conditions requires a broad range of high-quality, clinically effective products that are easy to use, cost-effective and maintain patient quality of life.

This range provides an all-encompassing portfolio to meet the treatment needs of patients requiring primary and/or secondary immobilisation through to post-healing rehabilitation.

Casting and Splinting Workshops

Essity has an ongoing commitment to educational support for clinicians involved in the provision of casting and splinting services in the healthcare environment. Training is offered in the form of in-services or educational workshops (with hands-on activity) to ensure all clinicians understand the appropriate and cost effective use of our products.

There is also a range of educational resources including application posters, instructional videos, application manuals and usage guides to assist in treatment management.

If you would like more detailed information about the education services on offer, please contact Essity Customer Service on 1300 276 633.

Dynacast® Prelude

Acute Synthetic Splinting System

- All in one system
- High conformability
- Easy moulding
- Smooth splint surface
- Easy to cut
- Lightweight

Dynacast® Prelude is an acute synthetic splinting system combining polyurethane coated fibreglass and polypropylene padding. Dynacast® Prelude comes pre-assembled and ready to use, giving a cost effective splinting alternative to traditional ways of providing support and immobilisation.

Single layer knit design

Dynacast® Prelude is constructed using an innovative 3D knitting process, which produces a single interlocking knit layer construction.

This construction ensures high conformability to the limb, optimum splint smoothness and increased patient comfort throughout the term of the treatment.

Indications

- Primary immobilisation of acute fractures and soft tissue injuries

Gypsona®

Plaster of Paris Bandage

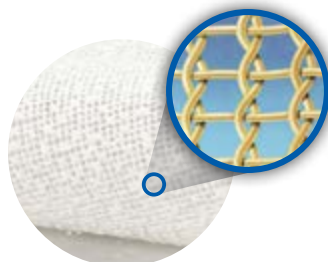

- Fast immobilisation of fractures
- Leno cloth for good conformability and stability
- Rich creamy texture
- Low plaster loss
- Moisture resistant packaging

Gypsona® Plaster of Paris (POP) bandages are made from a leno cloth, uniformly impregnated with a high quality fast setting Plaster of Paris, which has a rich creamy texture for easy handling. The interlocked weave of the leno cloth makes the wet bandages stable, conformable and easy to mould and minimises plaster loss.

Benefits

Gypsona® retains the Plaster of Paris on the cloth so plaster loss is at a minimum whilst soaking and when being moulded. The cloth permits Gypsona® to be accurately and easily moulded to give a smooth inside surface and uniform thickness. Gypsona® will set and harden quickly to give strong immobilisation for trauma and corrective work.

Indications

- For external splinting of fractures
- Immobilisation of diseased bones and joints
- Correction of deformities
- Emergency splinting
- Making negative and positive casts

Gypsona® Extra 3

Plaster of Paris Bandage

- Leno weave gauze for good conformability and stability
- Rich creamy texture
- Low plaster loss
- Moisture resistant packaging
- Rapid immobilisation of fractures

Gypsona® Extra 3 Plaster of Paris (POP) bandages are made from a leno weave gauze, uniformly impregnated with a high quality fast setting Plaster of Paris, which has a rich creamy texture for easy handling. The interlocked weave of the leno gauze makes the wet bandages stable, conformable and easy to mould as well as minimising plaster loss.

Indications

- External splinting of fractures
- Immobilisation of diseased bones and joints
- Correction of deformities
- Emergency splinting
- Making negative and positive casts

Primary Immobilisation

Specialist®

Plaster of Paris Bandage

- Excellent strength
- Extra fast setting
- Low plaster loss

Specialist® Plaster of Paris uses a time-tested formula and manufacturing process to produce a consistent plaster that is uniformly coated and firmly adhered to the gauze. The result is a plaster with high dry/wet plaster retention. This means that more plaster is applied to the cast and not wasted in the wrapper or dip bucket. Specialist® casts have early green strength thus reducing the time that the cast is vulnerable to distortion

Benefits

Traditional dry formula feel and easy to use characteristics of traditional plaster.

Consistency Eliminates the need to adjust the application technique. No variation in quality from roll-to-roll.

High wet/dry plaster retention More plaster on the roll.

Early high green strength Minimises the period when casts may be vulnerable to distortion.

Strength Provides casts that are ideal for a wide range of applications.

Indications

- Fracture management
- Podiatry
- Talipes Equinovarus

Delta-Lite® Plus

Fibreglass Casting Bandage

Secondary Immobilisation

- Greater conformability
- Easy to apply
- High lamination

Delta-Lite® Plus is a fibreglass cast tape that combines a fibreglass substrate and advanced water activated polyurethane resin system which provides tack free properties. The tack free properties allow ease of application and moulding, using standard examination gloves.

Easy to Apply

The resin formulation has improved the unrolling tension of the bandage, making it easier to apply the cast, using standard examination gloves.

Greater Conformability

The heat treated substrate of Delta-Lite® Plus improves the conformability, providing greater moulding capabilities for rigid primary and secondary casting applications.

High Lamination

The resin system also ensures maximum lamination and end laydown, resulting in a smooth finished cast which is strong, long lasting and lightweight.

Indications

- Primary immobilisation of acute fractures and soft tissue injuries

Delta-Cast® Elite

Polyester Casting Bandage

- Easy to apply
- Clear radiograph viewing
- Very conformable
- Rigid support

Delta-Cast® Elite has been designed with ease of application and patient comfort in mind. Our patented fibreglass-free casting material combines strength and rigidity with soft edges for enhanced patient comfort.

Patented Fibreglass-Free Substrate

Delta-Cast® Elite has a patented polyester substrate featuring extensible yarns that easily shape to body contours, providing enhanced moulding capabilities for both primary and secondary casting applications and producing less dust during cast removal.

Patented Resin System

Ensures maximum lamination and end laydown for strong, long-lasting casts.

Indications

- Rigid primary and secondary casting applications where enhanced radiograph viewing is important

Delta-Cast® Prints

Patterned Polyester Casting Bandage

- Easy to apply
- Smooth finish, soft edges
- Clear radiograph viewing
- Available in five popular patterns

Delta-Cast® Prints has been designed with ease of application and patient comfort in mind. Our patented fibreglass-free casting material combines strength and rigidity with soft edges for enhanced patient comfort.

Delta-Cast® Prints large range of colourful patterns assist in overcoming anxiety of patients when having their cast applied.

Fibreglass-Free Substrate

Delta-Cast® Prints is comprised of polyester substrate which features extensible yarns that easily shape to body contours, providing enhanced molding capabilities for both primary and secondary casting applications and produces less dust during cast removal.

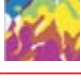

Patented Resin System

The resin formula of Delta-Cast® Prints with slip agent surfactant creates a slippery touch during working time for an optimal moulding feeling. This gives you the freedom to work with the glove of your choice, giving you a reliable precise working window.

Indications

- Rigid primary and secondary casting applications where enhanced radiograph viewing is important

Delta-Cast® Soft

Semi-Rigid Polyester Casting Tape

- High conformability
- Controllable set time
- Superior durability
- High patient comfort
- Earlier patient mobility
- Versatile applications

Delta-Cast® Soft is fibreglass-free and was designed to provide variable support to fractures and soft tissue injuries. Its semi-rigidity allows for more flexibility and mobility, thus helping to reduce immobilisation related problems such as atrophy or joint stiffness. As a result, the overall healing process tends to be shortened.

Fibreglass-Free Substrate

Delta-Cast® Soft has multi-directional knit polyester substrate for excellent conformability, wrinkle free applications and enhanced moulding capabilities.

Indications

- Casting applications where a semi-rigid cast is required. Most commonly used for Talipes, serial casting and can be removed using scissors or by unwrapping

Orthopaedic Soft Goods

Soffban® Natural

Natural Orthopaedic Padding

- Absorbent
- Conformable
- Easy to tear
- Soft
- Autoclavable
- Paper wrapped

Soffban® Natural has been developed to provide the conformability and easy handling normally associated with synthetic paddings, whilst providing the softness and absorbency of a natural padding. This makes it ideal for use under Gypsona® Plaster of Paris bandages.

Advantages

Absorbent – The Soffban® Natural fleece absorbs sweat and exudate, reducing the risk of skin maceration and irritation, particularly in hot climates.

Conformable – Soffban® Natural conforms well around awkward body contours, eliminating the need for pleats or tucks during application, to produce even coverage and reduce the chance of pressure points.

Easy to tear – Soffban® Natural tears and teases apart easily, aiding rapid application and reducing the risk of stressing the fracture while finishing padding application.

Soft – The 100% Rayon fleece of Soffban® Natural is soft and comfortable for the patient, providing excellent cushioning and protection.

Autoclavable – Soffban® Natural is autoclavable making it suitable for use in theatre, or for any procedures where sterility is desirable.

Paper-Wrapped – The paper wrap on Soffban Natural does not need to be removed for autoclaving, but maintains the integrity of the roll during this process.

Indications

- Padding of orthopaedic conditions
 - POP casts
 - Synthetic casts
- Compression bandaging

Soffban® Synthetic

Water-Resistant Orthopaedic Padding

- Highly conformable for easy shaping to all body contours and joints
- Easily tearable for quick and trouble free application
- High loft for maximum cushioning and protection
- Feathers out easily, giving a smooth finish
- Low moisture absorbency minimises skin maceration

Soffban® is a comfortable, soft and smooth orthopaedic padding. It features a high loft for maximum cushioning and protection and feathers out easily, giving the padding a smooth finish.

Soffban® is highly conformable for easy shaping around awkward body contours and joints. The padding is resistant to moisture absorbency, minimising the risk of skin maceration. Soffban is easily tearable for quick, trouble-free application and is also autoclavable, making it suitable for use in theatre or sterile procedures.

Indications

- Padding of orthopaedic conditions
 - POP casts
 - Synthetic casts
- Compression bandaging

Orthopaedic Soft Goods

Artiflex® Soft

Orthopaedic Padding

- Provides excellent cushioning and soft for patient protection
- Padding allows moisture to pass through so it can evaporate
- Provides exceptional conformability and a smooth profile
- Padding can be sterilized for theatre use

Artiflex® Soft synthetic cast padding is composed of a blend of 85% polyester and 15% polyolefin providing excellent protection and comfort to the patient. Polyester retains good wicking properties, which allows it to transport moisture and rapidly dry out.

Velband™

Absorbent Orthopaedic Padding

Velband™ is hypoallergenic bandage with a unique three-layer structure for easy application and long-term comfort. It provides excellent cushioning and moisture management under Plaster of Paris or synthetic casts, avoiding irritation and pressure sores by keeping the skin dry and comfortable.

Velband™ is easy to handle and remove, and is autoclavable for theatre use.

Indications

- Padding of orthopaedic conditions
 - POP casts
 - Synthetic casts
- Compression bandaging

Orthopaedic Soft Goods

AquaCast® Liner

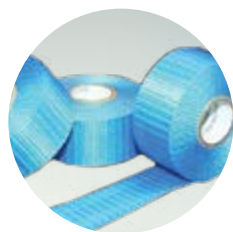

Waterproof Cast Liner

AquaCast® is a waterproof cast liner specially designed to reduce the incidence of problems associated with synthetic casts. AquaCast® allows water to drain quickly from the ends of the cast, enabling patients to shower and bathe as normal and avoid the hassles associated with keeping traditional casts dry.

AquaCast® is highly conformable, with the adhesive coating on one side of the liner allowing for easy application and minimal slippage on the limb.

Removal of the cast is also simplified by use of the Saw Stop cut-resistant strip under the cast, which increases the safety margin during saw contact.

Undercast Materials

Indications

- Injury:
 - Non-displaced and minimally displaced fractures
 - Sprains
 - Post operative (healed incisions)
- Treatment:
 - Short-arm and below-knee casts
 - Hydrotherapy
 - Sports people and others with an active lifestyle
 - Patients facing particular care and hygiene issues, especially incontinence

Delta-Dry®

Water Resistant Cast Padding

- Conformable
- Water resistant
- Traditional cast removal with no extra components needed

The unique patented technology in Delta-Dry® has created a water resistant cast padding which allows easy application by the clinician and affords the patient all the lifestyle benefits of a cast they can get wet.

Advantages

- Allows patients to shower, swim and bathe like normal
- No special tools are needed for application or removal
- Conformable enabling patient to having increased comfort and protection
- Easy to apply
- Better long term water resistance
- Offers more under cast protection
- Eliminates the need for stockinette

Indications

- Non-displaced and minimally displaced fractures
- Sprains
- Post operative (healed incisions)

Protouch® Stockinette

Synthetic and Cotton Stockinette

- Available in synthetic or cotton
- Conformable and easy to use
- Available in a wide range of sizes

Protouch® synthetic and cotton stockinettes provide patients with optimum comfort at the critical juncture where the skin meets the cast.

Protouch® Synthetic Stockinette

- Made of synthetic fibres to retract moisture away from the skin for rapid evaporation
- Soft and conformable providing good cushioning and comfort to the patient
- Stretches to three times its normal width to conform to an arm, leg or body
- Available in a variety of sizes for all casting applications

Protouch® Cotton Stockinette

- Ideal material for an initial undercast layer
- Made of a high-grade knitted cotton
- Soft and conformable providing good cushioning and comfort to the patient
- Stretches to three times its normal width to conform to an arm, leg or body
- Available in a variety of sizes for all casting applications

Delta Terry-Net™ S

Terry Cloth Stockinette

- Conformable and easy to apply
- Cost-effective roll presentation
- Soft for patient comfort and protection
- Lightweight, flexible and durable

Delta Terry-Net S is for use where extra patient comfort is required. Supplied in an easy-to-use dispensing box for improved storage and handling, Delta Terry-Net™ S is latex free.

Terry Knit Design

The terry knit design of Delta Terry-Net™ S allows clinicians greater flexibility to accommodate varying limb sizes as well as increased treatment flexibility in the management of specialised casting indications, such as total contact casting. The terry knit design also allows for enhanced protection to fragile skin when managing skin tears.

Terry Knit Fibres

The soft moisture wicking fibres of Delta Terry-Net™ S provide improved patient comfort and reduced maceration whilst providing increased protection both in-situ and upon removal.

deSoutter

Cast Removal System – CC4

The powerful CC4 CleanCast™ saw and dust extraction system comprises of the CC4 mains voltage oscillating saw, extraction hood and the CCS portable extractor unit with highly efficient dust filtration capability.

Powerful 110 Watt Motor

Maintains rapid and efficient cutting on the thickest of body casts

Control and Maneuverability

Knurled grip close to saw blade provides operator with greater flexibility of movement.

Visibility

Clear polycarbonate extraction hood offers excellent visibility when cutting. The hood is fully rotatable to suit the most convenient cutting position.

Low Noise

The CCS Extractor Unit is exceptionally quiet at only 58dB(A) and has two speed settings.

Four Levels of Filtration

A filtration level of 99.997% on all dust particles greater than 0.5 microns is achieved with the extractor.

CC4 Saw Specifications

Oscillating speed:	14000 osc/min.
Voltage:	230V
Weight:	1.3 kg
Sound level:	70 dB(A)
Length:	333 mm

deSoutter

Cast Removal System – CC5

The CleanCast™ low voltage saw and integrated extractor system combines state-of-the-art ergonomics with the performance and durability you've come to expect with all deSoutter Medical products.

Low Voltage for Increased Safety

Saw operates at only 25v d.c.

Integral Dust Extraction Path

Vacuum is ducted internally through the handpiece to provide better visibility and handling.

Two Speed Control on Both Saw and Extractor

Quiet, low speed setting is ideal for use with children, whilst high speed setting allows thick body casts to be cut quickly.

Four Levels of Filtration

A filtration level of 99.997% on all dust particles greater than 0.5 microns is achieved with the extractor.

Low Noise

Specially designed rubber motor mounts insulate the internal mechanism from the outer case. This results in an extremely low sound.

CC5 Saw Specifications

High Oscillating speed:	16000 osc/min.
Low Oscillating speed:	11800 osc/min.
Voltage:	230V
Weight:	0.85 kg
Sound Level:	68 dB(A)

29mm
Ref No. 15320
73356-02

Specifically developed for paediatric use, the Red Dot award winning CSP System is exceptionally quiet and compact minimising patient anxiety. The CSP System offers both battery and mains power options, and lithium ion battery technology provides an unrivalled power to weight ratio.

CSP-1201 Saw Specifications

Oscillating speed: 14800-17500 osc/min.
Weight: 319 grams
Sound level: 55 dB(A)

Battery Specifications

Capacity: 30.8 Wh
Weight: 437 grams
Charging time from flat: < 3 hours

Supplied with interchangeable mains supply adaptors for use in most countries.

- Soft start feature with noise control helps minimise patient anxiety
- Continuous 2 hour – cutting performance
- Built-in service reminder – 300 charging cycles
- Display allows the user to select the optimum cutting speed and view the remaining battery capacity
- Micro processor controlled voltage booster ensures constant cutting performance - zero deterioration

BSN Cast Shoe

Open Toe Cast Shoe

- Durable
- Precise fit
- Rocker bottom

Durable Cast Shoes

The BSN Cast Shoe is constructed with quality materials using the highest manufacturing standards. Constructed with a heavy canvas upper, it is a premium cast shoe at an affordable price. Three hook and loop enclosures ensure a precise fit while the rocker bottom helps promote normal gait pattern.

Advantages

- High level of durability
- Precise fit
- Maximum shock absorption
- Comfortable and easy to apply

Actimove® Genu

ECO Knee Immobiliser

Orthopaedic Soft Goods

- Comfortable and skin-friendly
- Low profile and effective patient fit
- Washable

Actimove® Genu ECO Knee Immobiliser supports the knee and helps to reduce pain after trauma or surgery.

Advantages

- Pre-shaped foam for knee and calf
- A detachable hook and loop sensitive closure system with D-rings permits individual patient adjustments
- Removable and adjustable aluminium stays allow good anatomical fit
- Terry cloth interior padding for patient comfort
- Splint is washable for additional patient hygiene

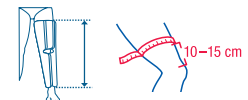

Extension Tabs

- Foam tabs, with hook, attach to ECO Knee Immobiliser to increase the width of the device
- This system fits wider leg circumferences, reducing inventory of sizes

Indications

- Following surgery, soft tissue injuries and minor fractures in the knee region

Actimove®

Lower Leg Walker

- Quick and easy application
- Superior comfort

A high-quality rigid outer skeleton ensures high protection of the foot, ankle and lower leg. Circumferential strapping, a shock absorbing sole and breathable materials provide great comfort for the patient. The rocker bottom of the Actimove® Walker facilitates a natural physiological gait when walking.

Actimove® Air Walker

Actimove® Air Walker has a liner which can be inflated for oedema control. In just a few pumps, the inflated liner can reduce the void around the foot and ankle. This improves intimacy of fit, reduces unwanted movement, and allows for optimal patient comfort and wearing tolerance.

Comfort

Anatomically contoured struts prevent ankle motion without causing friction against the sides of the calf. A full-length insole of pressure mouldable comfort foam conforms to the foot.

Indications

- Available in 5 sizes (XS, S, M, L, XL)
- Suited for a broad range of post operative and post trauma applications

Actimove® Umerus Comfort

Shoulder Immobiliser

- Helps to prevent patients from experiencing neck pressure and the hassle of a moving neck pad thanks to the broad 5.5 cm wide sling
- Improves shoulder stabilisation through the waist strap which can be adjusted to suit most patients
- Allows for better hand positioning through the thumb loop which limits the rotation of the forearm while still allowing full finger movement
- Simple to apply and adjust for an individual fit with easy threading through the freely rotating O-rings
- Patients with a compromised arm can easily take the immobiliser off and back on, as a one-handed self-application is helped by the hook and loop Y-Tabs and open-and-close pocket design
- Cares for clothes through the gentle pocket material
- Machine washable at 40°C
- Radiolucent
- Metal-free

Actimove® Umerus Comfort is the superior comfort shoulder and upper arm immobiliser for limited abduction, extension, internal and external rotation of the humerus. Patients will appreciate the easy application and breathable material while they are immobilised.

Indications

- Postoperative support
- Fracture management (e.g. clavicle, scapular, humeral, and greater tuberosity fractures)
- Joint dislocations (e.g. acromioclavicular & sternoclavicular dislocations, shoulder luxation)
- Inflammatory diseases (e.g. calcific tendinitis of the rotator cuff)
- Minor instability of the shoulder
- Support for hemiplegic patients

Actimove® Sling

Collar and Cuff Support

- Comfortable and secure support
- Strong, secure “Y” closure tabs
- Convenient dispenser box presentation

The padded strap and “Y” closure tabs of the Actimove® Sling provide effective vertical support to the collarbone and upper limb area.

Advantages:

- Extra patient comfort with padded strap
- Y-Tab hook system facilitates secure clinical positioning
- Convenient dispenser box presentation
- 28 Y-Tabs are included in each box. Additional Y-Tabs can be purchased, if required

Indications

Following trauma injuries, collarbone injuries and soft tissue injuries

Actimove® Sling for Kids

Collar and Cuff Support

- Distracts girls and boys from an often traumatic situation through the unique, playful pattern
- Easily remove the sling from the poly bag by cutting an opening on top for access to the middle of the roll
- Drives patient compliance through increased comfort, as rolling of the sling is prevented by the three lengthwise seams
- When removing the sling, this can be done without opening the Y-Tabs (includes 14 Y-Tabs)
- Machine washable at 40°C
- Radiolucent
- Metal-free

Actimove® Sling for Kids is the child-friendly arm sling in a fun and colourful pattern to make kids, parents and clinicians smile.

The one-roll polybag pack uses little storage space and allows for easy access to the sling through its top opening system. Individually adjustable in length, provide arm slings for a stable and supported forearm through various application styles in one product.

Indications

- Fracture management (e.g. clavicle, scapular, humeral, and greater tuberosity fractures)
- Support while wearing a cast or splint
- Joint dislocations (e.g. acromioclavicular & sternoclavicular dislocations, shoulder luxation)
- Temporary arm stabilisation in emergency/paramedic care

Actimove®

Rhizo Forte

- Firm cervical support
- Easy to apply
- Convenient colour coded identification system

Actimove® Rhizo Forte brace is designed to restrict thumb movement whilst maintaining the daily functionality of the hand. The Red Dot® award winning design ensures the immobilisation of the CMC and MCP joints without restricting the movement of the wrist and the other four fingers.

Special features:

- Low profile design with smooth edges for high wearing comfort
- Composition and design that is easy to clean
- Closures which allow the brace to be easily secured with one hand
- Effectively restricts thumb movement, while leaving the four fingers and the wrist to move freely
- Mouldable aluminium core is easily adjustable for a perfect fit

**reddot award 2014
winner**

Indications

- Painful conditions and irritations of the thumb joints (e.g. Osteoarthritis)
- Rheumatoid Arthritis of the thumb
- Ulnar Collateral Ligament injuries of the MCP1 Joint (e.g. Skier's thumb)
- Soft tissue injuries (e.g. sprains)
- Ligament instability
- Post operative immobilisation

Actimove® Vertebrace

Extrication Collar

- Firm cervical support
- Easy to apply
- Convenient colour coded identification system

Actimove® Vertebrace is a simple to use, lightweight, padded support device used to help immobilise the cervical vertebrae. Actimove® Vertebrace is designed to aid in supporting and limiting movement of the patient's head and neck during transfer to a backboard. Properly applied, the collar completely encircles the neck and provides rigid support for the head, chin and base of the skull. All materials are radiolucent so that x-rays may be taken with the collar in place.

Special Features:

- Large tracheostomy opening
- X-ray transparent
- One piece construction with integral flip-up chin support. No assembly required
- Reinforced back provides firm cervical support
- Stack flat or roll tight for efficient storage

Easy to use sizing guide

Colour-coded Velcro band closure allows quick identification of a full range of sizes

Indications

- Temporary management of traumatized cervical spine to help prevent further injury
- Osteoarthritis and accompanying trauma or strains
- Muscle spasms and musculoligamentous tears or strains
- Cervical tendinitis
- Post cervical fusion
- Foundation for cervical casting
